## Examples for writing and reading in solid pod

kevin23699

1 jeffz Mar 17

is there any tutorial or example of how to read from a pod using solid-file-client?

Here is [an example of reading a file from a pod](#) <sup>18</sup> ... And here is [the documentation on using readFolder\(\) and other pod access methods](#) <sup>12</sup> . If you have questions after trying those, ask again here or in the gitter chat.

Ah, seeing this thread now, there now exist some additional resources that might be relevant to people running into this later.

First, [solidproject.org](#) now has [a tutorial that walks you through the steps to add Solid to a web application](#) <sup>11</sup> .

Additionally, [this cheatsheet](#) <sup>9</sup> has examples of many different operations you can do on data in Solid using different libraries.

Hope that helps anyone!
