

Modelio

Nut Bandera González
Miguel Cuesta Martínez
María Flórez Miranda
Alejandro Matas Sánchez

What is Modelio?

- Modeling environment
- Emphasis on consistency checking
- BPMN + UML support
- Java code generation and reverse

Stakeholders: Users

- Code developers
- Business Architects
- Software Architects

Stakeholders: Contributors

- Analysts
- Open Source Supporters
- Class Relation Specialists:
 - Philippe Desfray

Quality Attributes

Interoperability

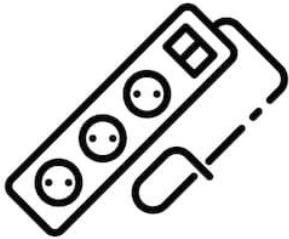

Learnability

Quality Attributes

Extensibility	
Reliability	

Constraints

The software is open source

**The software was developed in
Java**

Constraints

**Modelio participates in the
OMG's Model Interchange
Working Group**

UML Standards are often flawed.

Development Aspects

- Developed mainly in **Java** (and C++)
- Core architecture supports extension -> MODULES (developed in Java)
 - Modelio API in development + debugging
- Report + fix bugs

Modelio 4.0 API

Packages	
Package	Description
org.modelio.api.astyle	
org.modelio.api.modelio	
org.modelio.api.modelio.audit	
org.modelio.api.modelio.diagram	
org.modelio.api.modelio.diagram.autodiagram	
org.modelio.api.modelio.diagram.dg	
org.modelio.api.modelio.diagram.style	
org.modelio.api.modelio.diagram.tools	
org.modelio.api.modelio.diagram.tools.standard	
org.modelio.api.modelio.editor	
org.modelio.api.modelio.exchange	
org.modelio.api.modelio.mc	
org.modelio.api.modelio.meta	
org.modelio.api.modelio.model	
org.modelio.api.modelio.model.event	
org.modelio.api.modelio.model.scope	
org.modelio.api.modelio.module	
org.modelio.api.modelio.navigation	
org.modelio.api.modelio.pattern	
org.modelio.api.modelio.picking	
org.modelio.api.module	
org.modelio.api.module.command	
org.modelio.api.module.command.standard	
org.modelio.api.module.context	
org.modelio.api.module.context.configuration

Modelio's core modules

Modules and Components

- GOAL: extend + add capabilities to Modelio
- Modelio offers

Model Components

- Pts. of large model into 1 file
- Sets of tools, models, libraries, etc.
- MDAKit, Draw2D, .NET Framework Class Library, RCP Eclipse...

MODULES

- Flexible extension mechanism
- **Java + XML** + resource files in project -> packaged
 - Deployed + executed in Modelio
- Wide range of existing modules + can create your own

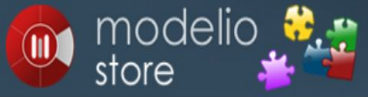

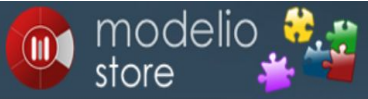

Scripts (Jython)

- Java implementation of Python
- To create Macros
 - \approx modules
 - less powerful

Modules and Components: Modules

EXISTING MODULES		Examples	 Java Designer  Excel Exchange  Web Model Publisher  ArchiMate Architect
DEVELOP YOUR OWN	 	Developed with...	  UML/BPMN Metamodel 

RCP Architecture

- Manage GUI
- Build applications on existing platforms
- Workbench
- Integrate software components

GEF: Graphical Editing Framework

- Support Modelio diagrams
- Provides tools and framework components
- Different components: editor, tool palette, figures, ...
- Several patterns: MVC, Factory, Observer, ...

MDA Architecture

- Separates functionality from implementation
- Viewports: CIV, PIV, PSV
- Models: CIM, PIM, PSM
