What is a microservice?

- It's an architectural design.
- It's based on operating independent services (Instagram)
- Can be considered as an small independent application.
- Usually uses a continuous integration systems like Docker.

Monolithic front end

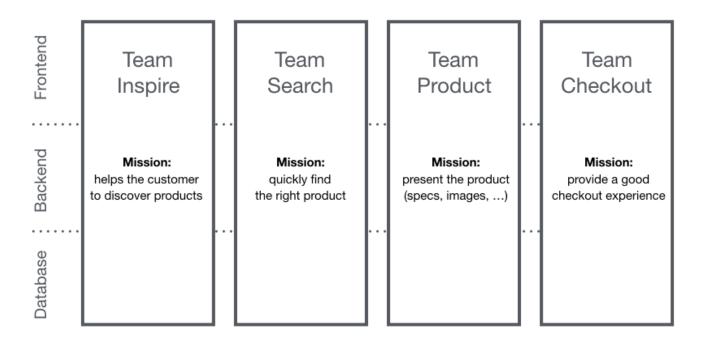

- Uses the monolithic pattern, which means that all the front-end is a single block.
- The current trend is to build a feature-rich and powerful browser application, aka single page app.

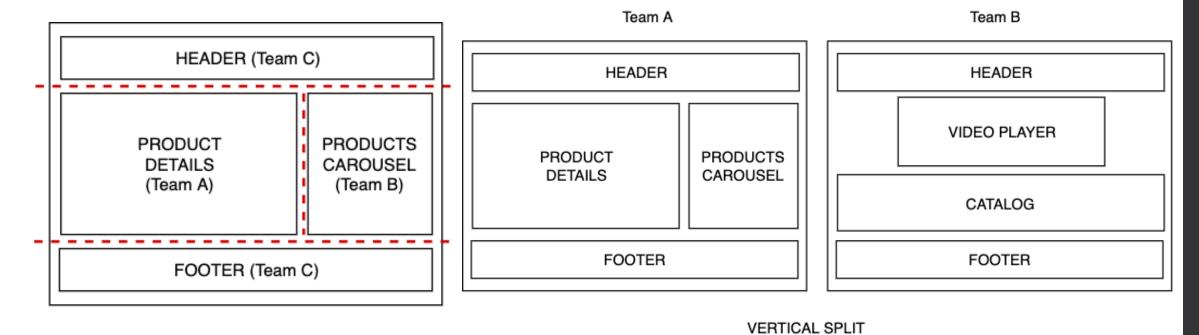

What is a micro frontend

- Extension of microservices
- Website as Composition features
- Independent teams
 - Software
 - Deployment
- End to End

End-to-End Teams with Micro Frontends

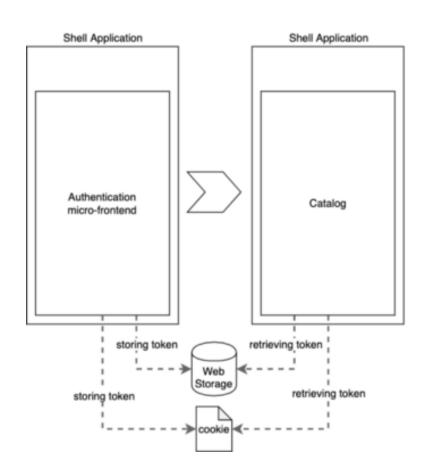

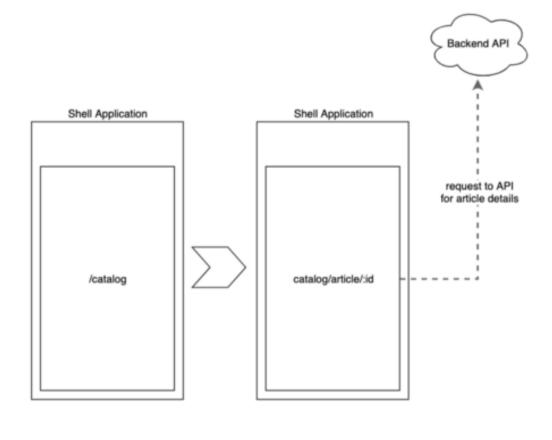

Approaches

HORIZONTAL SPLIT

Comunication

Tienda online

Example

Reserva Especial Cerveza Pack de 24 botellas x 330 ml

Benefits of using Micro Frontends

- Independent deployment
- Incremental upgrades
- Simple and decoupled codebases
- Autonomous teams

```
ment.getElementById(div).
Lf(i==2)
r atpos=inputs[i].indexOf( )
ar dotpos=inputs[i].lastIndexid
if (atpos<1 || dotpos<atpos+2 ||
document.getElementById('errEmail')
document.getElementById(div).imm
```

Downsides of using Micro Frontends

- Payload size
- Environment differences
